Kayak Easy Hanger

Holds Up to 125 lbs.

The RAD Sportz Kayak Wall Hangers are a quick and easy solution for storing your kayak. These easy to mount wall hangers are fabricated with strong heavy duty steel and can hold up to 125 lbs. The hangers come with mounting screws for simple installation. The wall hanger is the ideal way to keep your kayak off the ground and out from underfoot. Avoid damaging the finish surface of your kayak on rough cement garage floors or sandy porches. The Wall Hanger is easy to install, just follow these instructions.

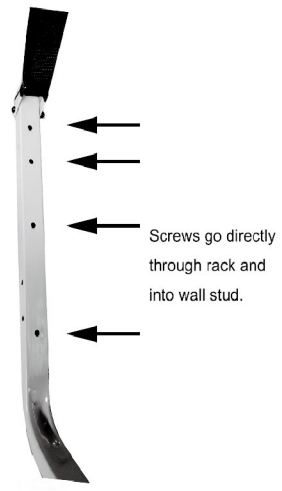

Installation

1. Find a safe location that will keep your kayak out of harms way from swinging doors and falling objects, such as rakes, shovels and other typical tools found in most garages and storage sheds. Keep the space below the kayak wall hangers clear with ample room to walk up holding your kayak without tripping or stumbling. Do not mount hangers higher than you can reach.

2. Locate solid wood studs to mount the hangers to. It is important that the screws are firmly embedded into the wood stud. In cases of thick drywall or wall plaster, you may have to purchase longer screws. ***Screwing only into the drywall is not enough and could result in personal or property injury, damage or harm.***

   - Insert screws directly through the hanger and into wall stud.
   - Rub screw threads on the bar of soap for ease of installation.
   - Leave the top screw slightly loose and insert the bottom screw, then tighten both screws.
   - **Note**: Make sure the hangers are mounted far enough apart to catch the narrow ends of the kayak. General rule is to space hangers 40% of your kayak's length. Example: if you have a 10' kayak, space your hangers 4' apart.

CAUTION

- **DO NOT** step, climb or hang on the rack
- **DO NOT** allow small children or pets to play in, on, or around the hangers. Improper installation and/or use of the hangers could cause serious injury and/or death
- **DO NOT** exceed the published load bearing weight of the product

How to Use

3. Unfastern the safety straps from the plastic buckle. Adjust the straps to ensure the kayak is floating and not touching the steel frame.

4. Lift your kayak onto the hangers. Connect straps and adjust to ensure the kayak is snug in the straps and will not move out of them.
